PROFILE

As a detail-oriented and innovative final-year Computer Engineering student with hands-on experience in AI/ML, web development, and data science. Proficient in building solutions that address real-world problems, from women's health and safety applications to mental health prediction and personalized web experiences. Seeking opportunities to apply my skills in software development, machine learning, and user-centric design in a dynamic tech environment.

EDUCATION

Qualification	Institute	Board/University	Year	%/CGPA
BE Computer Engineering	FR. Conceicao Rodrigues College Of Engineering	Mumbai University	Present	8.11
HSC	Lakshya Prep High School & Junior College	Maharashtra State Board	2021	90%
SSC	Swami Vivekanand High School & Junior College	Maharashtra State Board	2019	83%

PUBLICATIONS

- Sanika Patankar, Sania Almeida, Sanika Rozario, Shruti Patil, Supriya Kamoji, Heenakausr Pendhari, **“Mental Health Prediction using Machine Learning Models and Large Language Model”**, 2024 Second International Conference on Inventive Computing and Informatics (ICICI),IEEE, 18 September 2024, [10.1109/ICICI62254.2024.00040]

TECHNICAL SKILLS

- AI/ML
- Python
- Data Science
- Web Development (HTML, CSS, JavaScript)
- SQL
- UI/UX Design
- AWS
- Java, C
- Microsoft PowerPoint And Excel (Basics)

EXTRA-CURRICULAR ACTIVITES

- Marketing Head of Mozilla Campus Club 2023-2024
- Participated in Hackover 3.0 in November 2022
- Participated in Stratagem Hackathon2023 in March 2023
- Active participation on college sport tournament

PROJECTS

- FEME1** : A women-centric app built using JAVA and Android Studios focused on menstrual tracking and safety, offering features like alert messages, safe location guidance, and emergency calls by to enhance health organization and security for women.
- Twitter Sentiment Analysis** : Created an Machine Learning application using various algorithms and models.
- Mental Health Prediction using Machine Learning models and LLM** : An innovative website of Machine learning algorithms and Large Language Models to assess mental health issues like depression, anxiety, loneliness, and stress. Through personalized questions, the platform accurately predicts mental health conditions and offers tailored information along with educational videos on coping strategies.
- EmotiTunes** : An website designed that combines Django, TensorFlow, OpenCV, and AWS to create a web application that analyzes facial expressions in real-time, responding to users' moods with personalized experiences. It leverages AWS services like S3, RDS, Cognito, and EC2 for scalability, security, and efficient data management.
- CareerCraft** : It leverages AI, OCR, and LLM to optimize resumes by analyzing skills, recommending keywords, and suggesting improvements, while offering version control and performance tracking to enhance job search success.
